## Retail Mobility

### Raptool Ready To GO: Retail

- A complete solution for mobility in retail
- Easy to customize to your needs
- Integrate to your existing software systems

# Raptool Retail

## The Platform

The mobile software solution for retail that is ready to use, out of the box. Raptool Retail can also be customized to your specific needs, without programming. The most common store mobility functions are ready to be uploaded to a Windows Mobile or Windows CE device. Easy to integrate with most: ERP, POS, and other systems.

### Log in

Create profiles to block access to some functions. Create a separate user file if your system does not support it.

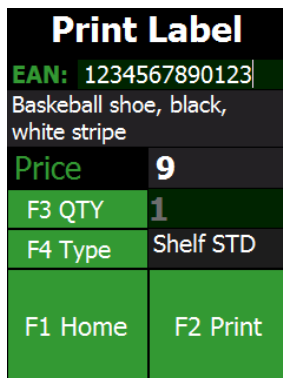

### Start menu

Change user, Place Order, Change product price, Print shelf labels, Inventory Count, Receiving goods

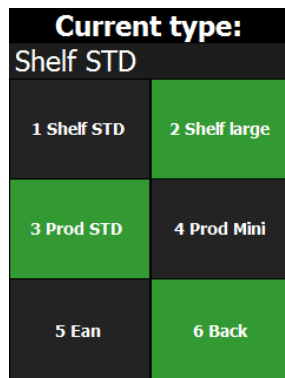

### Price change

Changes the price of a product. Enter new price, see the resulting margin. Save the new price to your POS system

### Print Label

Scan barcode, check price and print a new shelf label if needed. Change type or number of labels to print.

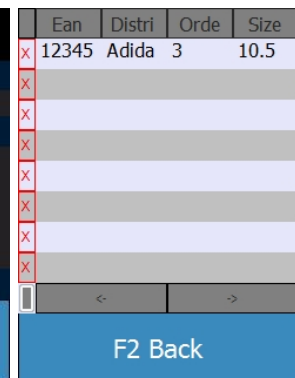

### Print Label/ Change type

Customize with your specific label types. Change type and go back to the label printing screen.

### Order

Order products to the store. See current orders for the product. Customize with size, package QTY, weight etc.

### Order List

See the products you have selected to order. Customization example: Orders can be separated, one for each distributor.

## Customize

All stores are unique. With the Raptool Designer we can customize your Raptool Retail solution to fit your needs. **Anything** can be changed and new functionality can be added in a very short time.

The easy to use, click interface requires **NO PROGRAMMING**, saving time and money.

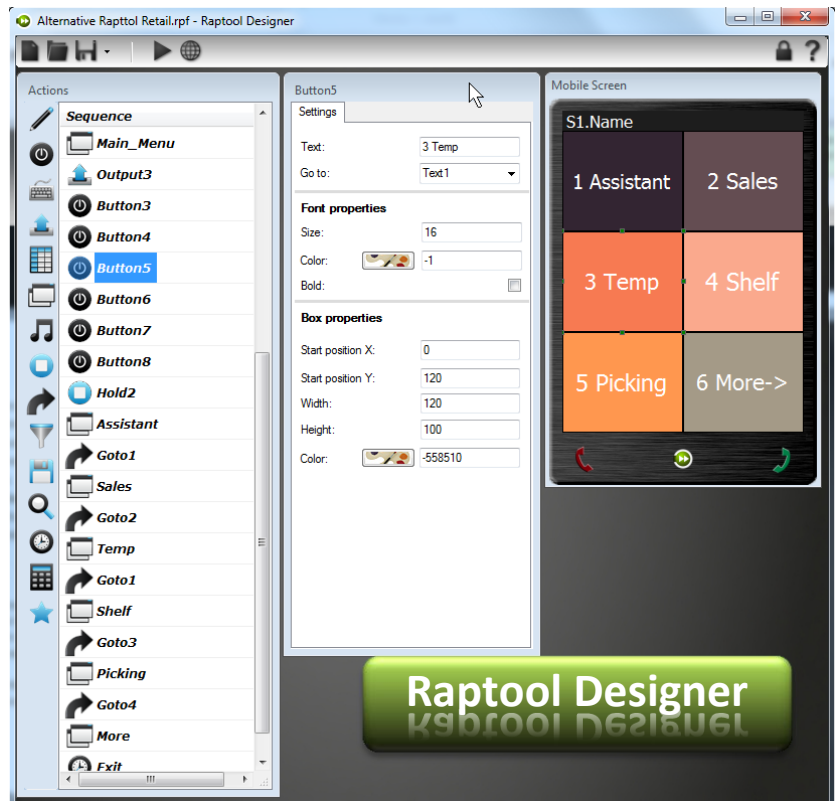

## Integrate

Data from your POS and other systems can be integrated to your Raptool Retail solution. The data generated in the mobile devices is sent back into the POS system. Communicate online through Wi-Fi or 3G or work off line, docking the mobile device to sync.

## The Raptool Designer

The easy-to-use, PC-based, designer lets you make mobile applications in minutes. By clicking on icons you add the functions that create your mobile application. No programming skills are required. Anyone can learn how to make their own applications, securing that your mobile solution can be developed further in the future.

Our goal is to provide the fastest way to make mobile applications.

## Raptool Retail add-on modules

### Mobile Store Assistant

Store personnel waste a lot of time running back and forth to a fixed terminal to help customers. With a Mobile device, this time can be spent selling products to customers. Some customers leave when the store sales personnel run off to a terminal, making the store lose business.

The Raptool Retail Mobile Sales Assistant adds functionality like: Is the product in stock? In the right size? Is there a similar product in stock? Is the right product in the right size in a nearby store? Book it for the customer in that store! Order the product to your store for the customer. When will it be in stock again? Take the contact information and call the customer when it is in stock. You can even allow your sales people to make price mark downs directly in the mobile terminal. Add manager's approval if desired. There is also a Que-Busting app.

### Mobile Shelf Placement

Shoe and clothing store sales personnel use a lot of time looking for the right size in the back end stock. With Mobile Shelf Finder you scan the barcode of the product the customer is interested in, enter the size and you see if it is in stock and where in the stock you can find it (*the green square in the screenshot*).

Alternatively the store personnel scan the product barcode and send a picking order to the personnel in the back end stock that come out with the product to the store. If your ePOS system does not support shelf numbers, Raptool can add that functionality separately.

Other examples of Raptool add-on modules:

- **Store Sales.** Shop with the customer and add products to his receipt.
- **Temperature.** When freezers temperature levels need to be checked.
- **Picking.** Have a web shop? Pick the goods in the store or warehouse.
- **Self-Scanning.** Let your customers do the scanning.

There are hundreds of Raptool Ready to go applications to choose from.

# The Raptool Software Suite

## Raptool Designer

The fastest way in the world to make mobile applications?

## Raptool Communicator

Integrate your other systems to your mobile solution

## Raptool Mobile Client
